WetStone Announces New Release of Gargoyle Investigator™ MP

Skaneateles, NY – September 6, 2022— WetStone Technologies, the world's leading provider of commercial steganography detection software, today announced the availability of a new version of its premier malware discovery tool, Gargoyle Investigator™ MP. Version 7.5 adds significant capabilities to Gargoyle MP, improving the efficiency and focus of Digital Forensics and Incident Response (DFIR) investigations.

Gargoyle MP simplifies breach and malware triage investigations and incident response activities. Investigators can perform a rapid search for malicious applications and lost or leaked corporate assets. Gargoyle MP is designed to provide significant clues regarding the activities, motives, and intent of a suspect.

Features introduced in Version 7.5:
- Ability to scan files, captured memory images and, when scanning live systems, active processes for evidence of potential malware infection using user-defined YARA rules.
- Standardized file names generated by Gargoyle.
- Improved third-party and custom hash file ingestion.

In announcing this major new release of one of WetStone's flagship products, Gargoyle Investigator MP, Carlton Jeffcoat, Senior Vice-President, said, "Law enforcement and corporate security teams, world-wide, use Gargoyle with WetStone's extensive datasets to discover and identify malicious applications and other files of interest in their digital forensics investigations. With the release of version 7.5 we are pleased to offer our users a powerful new capability, an integrated YARA engine, that extends their ability to detect and classify malware."

Gargoyle Investigator MP is licensed as an Electronic Software Download (ESD) for forensic workstations or on WetStone-supported USB flash drives (G-Flash) for field investigations. Current Gargoyle Investigator and G-Flash users with active support agreements may upgrade to version 7.5 at no additional charge.
